IT IS EXTREMELY IMPORTANT THAT YOU PAY YOUR FULL ATTENTION TO THE EXPERIMENT.

Therefore, we kindly ask you to:

1. **Find a quiet, calm space to do this study.** Please turn off your phone and other media to reduce distractions.

2. **Only participate from your desktop computer.**

3. **Do not exit the experiment once it has begun**. Due to the software we are using, we cannot guarantee you that you will be able to come back to the experiment and that your data can be recorded properly. In that case, we cannot compensate you for your time. Keep in mind the whole study should not take you more than 5 minutes.

4. **Focus on the tasks and respond attentively, but promptly.**

Not following these instructions can affect your compensation. If you fail to respond to 10% or more of the trials in this experiment, you will not receive (full) compensation. Thank you for your time and understanding.

Description: In this survey you will take part in a couple of tasks dealing with your opinions about a robotic dog.

Risks and Benefits: You will not be exposed to any sensitive topics. There appear to be no risks and discomforts associated with the session other than the ones common in everyday life.

Time Involvement: Your participation in this part of the session will take approximately 15 minutes.

Confidentiality and anonymity: All published and written data that may result from these studies will only be shared in an aggregate form and will be anonymous.

Compensation: You will receive credits for this session (exact amount announced in Sona) if you follow up on all instructions. **If you fail to respond to 10% of the trials in this experiment, you will receive 1 credit less.** If you do not finish the survey, you will not receive your credits.

Participation: Participation in this research study is completely voluntary. You have the right to withdraw at anytime or refuse to participate entirely. If you wish to stop participating, no credits will be allocated. You can participate in other sessions instead.

Contact Information: If you have any questions, concerns, or complaints, please contact Femke van Horen (femke.van.horen@vu.nl).

For the following task, we are interested in how you perceive different products.

On each screen, you will see two products.

To get familiar with the task, there is first a **practice round**.

You will **see two citrus fruits**. We will ask you to indicate which of the two citrus fruits **you like more.**

If you like the fruit on the **left** more, press **D**
If you like the fruit on the **right** more, press **K**

Please focus on the task and answer as fast as you can without thinking too much. We are interested in your initial responses, **there are no right or wrong answers.**

You can position your index fingers on the required keys: **left index finger on D, and the right index finger on K**.

Please note that WE WILL BE CHECKING YOUR ATTENTION throughout the experiment.

In attention check trials, you will see TWO IDENTICAL IMAGES on the screen. You will be asked to PRESS Q

instead of K or D like in other trials.

Attention check trials are NOT TIMED, so you will have enough time to respond.

Now that you are familiar with the task, we continue with the main task.

The main task is about **ROBOTIC DOGS (CONDITION 1)**

Robotic dogs are legged machines designed to mimic the movement and basic behaviors of real dogs, using advanced robotics, sensors, and artificial intelligence.

Please now imagine that this robotic dog is used for COMPANIONSHIP. It serves as a pet substitute in your home that can play and interact.

Now take a minute to picture how such mechanical robotic dog would sit in the room and how it would move its head and mechanical joints, how it would blink its eyes and move its ears.

The main task is about **ROBOTIC DOGS (CONDITION 2)**

Robotic dogs are legged machines designed to mimic the movement and basic behaviors of real dogs, using advanced robotics, sensors, and artificial intelligence.

Please now imagine that this robotic dog is used for CARE. It serves as a therapeutic companion that gives comfort and emotional support.

Now take a minute to picture how such a mechanical robotic dog would sit in the room and how it would move its head and mechanical joints, how it would blink its eyes and move its ears.

The main task is about **ROBOTIC DOGS (CONDITION 3)**

Robotic dogs are legged machines designed to mimic the movement and basic behaviors of real dogs, using advanced robotics, sensors, and artificial intelligence.

Please now imagine that this robotic dog is used for SAFETY AND SECURITY. It serves as a security assistant that can patrol the area and search and rescue people.

Now take a minute to picture how such a mechanical robotic dog would sit in the room and how it would move its head and mechanical joints, how it would blink its eyes and move its ears.

In the next three tasks, you will evaluate a set of robotic dogs on different dimensions. On each screen, you will see two robotic dogs and will be asked to make a judgment.

We now start with the first task. Please read the instructions carefully.

As in the practice trials, you will see two robotic dogs next to each other. In this first task, you will be asked to indicate which of the two robotic dogs **you like more.**

If you **like** the robotic dog on the **left** more, press **D**
If you **like** the robotic dog on the **right** more, press **K**

Please focus on the task and answer as fast as you can without thinking too much. We are interested in your initial responses, there are no right or wrong answers.

You can position your index fingers on the required keys: **left index finger on D, and the right index finger on K**.

Please note that WE WILL BE CHECKING YOUR ATTENTION throughout the experiment!

Before the task begins, you will first see what the task looks like.

Your task is to decide which of the two robotic dogs **you LIKE MORE.**

ROBOTIC DOG A

ROBOTIC DOG B

If you like the left one more (ROBOTIC DOG A), you **PRESS D**

If you like the right one more (ROBOTIC DOG B), you **PRESS K**

For Jeroen: On the next the randomized trials are shown, each time with the following text above it:

Condition 1

Imagine you are looking for a robotic dog used for **COMPANIONSHIP.** Your task is to decide which of the two robotic dogs **you LIKE MORE.**

Condition 2

Imagine you are looking for a robotic dog used for **CARE AND SUPPORT.** Your task is to decide which of the two robotic dogs **you LIKE MORE.**

Condition 3

Imagine you are looking for a robotic dog used for **SAFETY AND SECURITY.** Your task is to decide which of the two robotic dogs **you LIKE MORE.**

Thank you, the first task is finished!

Now, we will again show you the same robotic dogs. This time it is your task to indicate which of the two robotic dogs you think is more EERIE.

Eerie refers to a feeling of unease or discomfort that is unsettling (strange, unnatural).

If the robotic dog on the **left** feels more **eerie**, press **D**
If the robotic dog on the **right** feels more **eerie**, press **K**

Please focus on the task and answer as fast as you can without thinking too much. We are interested in your initial responses, there are no right or wrong answers.

You can position your index fingers on the required keys: **left index finger on D, and the right index finger on K**.

Please note that WE WILL BE CHECKING YOUR ATTENTION throughout the experiment!

For Jeroen: On the next the randomized trials are shown, each time with the following text above it:

Condition 1

Imagine you are looking for a robotic dog used for **COMPANIONSHIP.** Your task is to decide which of the two robotic dogs **feels more EERIE.**

Condition 2

Imagine you are looking for a robotic dog used for **CARE AND SUPPORT.** Your task is to decide which of the two robotic dogs **feels more EERIE.**

Condition 3

Imagine you are looking for a robotic dog used for **SAFETY AND SECURITY.** Your task is to decide which of the two robotic dogs **feels more EERIE.**

Thank you, the second task is finished!

Now, we will again show you the same robotic dogs. This time it is your task to indicate which of the two robotic dogs is **more similar to a real dog**.

If the robotic dog on the **left** is more similar, press **D**
If the robotic dog on the **right** is more similar, press **K**

Please focus on the task and answer as fast as you can without thinking too much. We are interested in your initial responses, there are no right or wrong answers.

You can position your index fingers on the required keys: **left index finger on D, and the right index finger on K**.

Please note that WE WILL BE CHECKING YOUR ATTENTION throughout the experiment!

Before the task begins, you will first see what the task looks like.

Your task is to decide which of the two robotic dogs at the bottom is

MORE SIMILAR TO THE DOG ON TOP.

If you think the left one is more similar (ROBOTIC DOG A), you **PRESS D.**

ROBOTIC DOG A

ROBOTIC DOG B

If you think the right one is more similar (ROBOTIC DOG B), you **PRESS K.**

For Jeroen: On the next the randomized trials are shown, each time with the following text above it:

FOR ALL CONDITIONS:

Your task is to decide which of the two robotic dogs **is more SIMILAR to the dog on top.**

Demographics

- Age
- Gender
- To what extent are you familiar with robotic dogs (1 not at all – 7 very much)
- To what extent are you familiar with robots in the health domain (online or in real life) (1 not at all – 7 very much)

Technology anxiety (general anxiety with all forms of technology and were assessed on a seven-point likert scale with endpoints strongly agree to strongly disagree. Higher scores indicate higher levels of anxiety). Meuter, M. L., Ostrom, A. L., Bitner, M. J., & Roundtree, R. (2003). The influence of technology anxiety on consumer use and experiences with self-service technologies. *Journal of business research*, *56*(11), 899-906. => items 1-3.

1. I feel apprehensive about using technology.

2. I have avoided technology because it is unfamiliar to me.
3. I am able to keep up with important technological advances.
4. I feel anxious when using new technologies.
